One-Year Renewal to the Term Contract for Wastewater Collection System Cleaning, CCTV Inspection and Recording, and Cured-In-Place Point Repairs for the Water Resources Department **(Citywide)**

The City's wastewater collection system consists of approximately 1,650 miles of sanitary sewer lines ranging from 6" to 78". As part of the City's Wastewater Asset Management Program, nearly 100 miles of sewer lines are cleaned and inspected annually to assess the condition of these lines, locate defects, and identify segments that need to be rehabilitated or replaced. This contract provides a contractor to perform internal video inspections of sanitary wastewater lines and document the findings and perform cured-in-place point repairs.

The Water Resources Department and Purchasing recommend authorizing the renewal with Hoffman Southwest Corp., dba Professional Pipe Services, at \$510,000, based on estimated usage.
