CALCULATION OF TRASH BIN MONTHLY CHARGES

To calculate the monthly collection rate, determine the quantity and size of the bin(s) in the bin factor matrix located in Table 1. Multiply the bin factor by the sum of the zone and non-zone day factors, times the applicable base rate.

The monthly rate is calculated based on a customer having the same size bin and pick-up days. If there are special circumstances, which require varying different sizes of bins and pick-up days, these rates will be calculated under the R3.9 rate type.

Trash bin rates are calculated based on an average weight of 75 pounds per bin yard for non-compacted material. If a customer is disposing of material that exceeds the average weight, the City reserves the right to assess a higher rate. See Table 2 to calculate additional weight charges.
